

13.Create a service in react that fetches the weather information from openweathermap.org and the display the current and historical weather information using graphical representation using chart.js

Install

```
npm install chart.js react-chartjs-2
```

WeatherService.js

```
export const getWeather = async () => {  
  let res = await fetch(  
    "https://api.openweathermap.org/data/2.5/forecast?q=Hyderabad&appid=YOUR_KEY&  
    units=metric" );  
  let data = await res.json();  
  return data.list.slice(0,5).map(x => x.main.temp);  
};
```

App.js

```
import { useEffect, useState } from "react";  
import { Line } from "react-chartjs-2";  
import { getWeather } from "../WeatherService";
```

```
export default function App() {  
  const [temps, setTemps] = useState([]);  
  
  useEffect(() => {  
    getWeather().then(setTemps);  
  }, []);  
  
  return (  
    <div>  
      <h3>Weather Chart</h3>  
      <Line  
        data={{  
          labels: ["1","2","3","4","5"],  
          datasets: [{ label: "Temp", data: temps }]  
        }}  
      />  
    </div>  
  );  
}
```

Output:

Hyderabad, India

27° C / F

Plenty of sun
